

Date: 2nd June, 2009

Affected Products: Serial Interface Board (SIB-2048)
Serial Interface Board for network (SIB-NET)
Intelligent Network Annunciator (INA)

Due to the obsolescence of a vendor supplied component, effective immediately, NOTIFIER is announcing the discontinuation of the following products:

SIB-NET	AFP-1010/AM2020 network interface board
SIB-2048A	AFP-1010/AM2020 serial interface board
INA	Intelligent Network Annunciator

Whilst we still carry a small quantity of some spares, once this stock is exhausted no replacement boards will be available.

Suggested Alternatives:

The suggested alternative for the INA is the NCA-2 Network Control Annunciator. Please note that in order to replace an INA with an NCA-2, NOTI-FIRE-NET must be version 5.0. The NCA-2 is compatible with AFP-1010, AM2020, and other legacy fire alarm control panels.

For SIB-NET and SIB-2048A alternatives, please contact your Notifier system consultant.

If you have any question please do not hesitate to contact me.

Sincerely,

James Edwards
Product Manager
