

# Notifier Training Programme

## Onyx AFP-3030: Basic

### Course Overview

Onyx AFP-3030 basic training is for those new to Notifier addressable panels. Installers, testers and service technicians will find this most useful as the course gives an understanding of panel functions, fault finding and basic programming.

### Training Duration

- 1 day: 8.30am – 4.30pm  
(Confirm with your local branch)

### Prerequisites

- Understanding of fire systems
- Basic computer literacy

### Learning Outcomes

On completion of the course, trainees will be able to:

- Interpret Displayed Events
- Understand and Operate the Fire Brigade Panel Interface
- Navigate through the AFP-3030 menu structure
- Define AFP-3030 system components
- Interpret, diagnose and resolve faults
- Identify System and ASC devices
- Understand Notifier detector and module functions
- Perform Panel Programming and Auto Programming
- Modify detector settings and attributes
- Perform walk testing

### Instructional Method

This course is delivered as a group instruction, PowerPoint presentation and practical demonstration. Students will have access to an AFP-3030 panel and field devices during the practical exercises. They will be provided with Notifier documentation and a Magni-Fire USB.
